APPENDIX A: OPEN FLAGS

#	Flag	Owner	Status
1	Replace every category-level source from the original (its own Editor's note says so) with a named paper, registry or guideline, with year.	Research desk	Open
2	"70 to 80% at stage III or IV": only "most patients at advanced stage" was confirmed in a retrieved Indian hospital paper. Find the named series and use its figure.	Research desk	Open
3	Screening trials (blood test and ultrasound): the statement matches the established US and UK randomised trials from general knowledge, not retrieved here. Cite the trials by name.	Research desk	Open
4	"Complete removal of tumour is among the strongest changeable predictors of survival", ICMR consensus document, and PARP-inhibitor access claims: cite named sources. "A second surgery recovers little" is softened from the original's stronger wording; keep it unless a source supports more.	Research desk	Open
5	The thesis (late stage and surgical quality matter more than unique biology) is an inference from stage mix and surgical literature. We did not retrieve a stage-matched India versus other-country comparison. The call is labelled moderate for that reason.	Editor	Open
6	Clinician review: ask a gynaecologic oncologist to read the piece before print.	Editor	Open
7	Estimates conflict: GLOBOCAN 2024 (45,566 / 28,782) vs 2022 (47,333 / 32,978, as cited in Indian papers). Both shown in the text. Confirm 2022 on the GCO site.	Research desk	Open
8	Do not reuse the website's hero image or charts without a logged licence; rebuild the chart from the table above.	Design	Open
9	Pre-freeze refresh: check for a newer ICMR registry report.	Research desk	Open

APPENDIX B: SOURCE LOG

#	Claim	Source	Tier	Status
1	Ovary: 45,566 new cases (4th among women, 5.8%), 28,782 deaths; breast 237,231 / 96,100; cervix 79,360 / 36,319	IARC GLOBOCAN 2024 India factsheet, fetched 30 Oct 2026	1	Verified
2	Incidence from subnational registry rates; mortality from model-based mortality-to-incidence ratios	Same factsheet, data source and methods	1	Verified
3	GLOBOCAN 2022: India ovary 47,333 cases, 32,978 deaths	Indian clinical papers citing GLOBOCAN 2022 (Cureus-indexed and IJRMS papers)	2	Show both; verify on GCO
4	Deaths per 100 cases: ovary 63, cervix 46, breast 41; 2022 ovary about 70	Our calculation	n/a	Illustrative
5	Most patients present at stage III-IV; 70-80% for epithelial cancers	Indian hospital series; exact figure only from the original article	2	Single-source; find named series
6	No validated screening test; blood test not recommended for routine screening	Guidelines; summary seen in a Tier 3 explainer	2/3	Cite named guideline
7	Screening trials show no mortality benefit	Established randomised trials; not retrieved	2	Unverified

#	Claim	Source	Tier	Status
8	Complete tumour removal as a prognostic factor; ICMR consensus document; PARP-inhibitor access	Original COSMINNOX article (category-level sources)	2/3	Unverified
9	Fallopian-tube origin of high-grade serous cancer	Original article; gynaecologic pathology literature	2	Cite named paper
10	Stage survival 85/65/30/15%: older international data	Original article	2	Attribute as historical, non-India

APPENDIX C: COPY-DESK CLEARANCE REPORT

Verdict: hold for the items in Appendix A, then cleared with changes.

Item	Issue	Fix	Status
Health claims	No cure, treatment promise or testimonial; symptom advice kept to "see a doctor"	General-information line present; clinician review before print	Open
Rewrite of group content	Adapted from the website article; credit line added	Editor to confirm credit wording	Open
Estimates	Modelled figures presented as estimates, with the 2022 conflict shown	Done	Done
Editorial position	Our View and the call	Editor sign-off	Open
Quotation and copyright	No direct quotes; website images not reused	None	Done
Defamation and fairness	No persons or companies named	None	Done
Related-party content	None	None	Done

APPENDIX D: CANVA DESIGN BRIEF (A4, 210 x 297 mm, 3 mm bleed)

Page	Layout	Depth element and graphic
1	Analysis opener. Navy gradient top 50%; headline in ivory serif; amber kicker "HEALTH"; standfirst below on ivory.	Overlapping statistics band: "45,566" new cases, "28,782" deaths, "63" deaths per 100 cases, with captions and source line.
2	Standard page, two columns, spine stripe "ANALYSIS".	Chart card: deaths per 100 new cases (ovary, cervix, breast), flat SVG.
3	Standard page; "What it means" as a three-row card for health departments, hospitals, women and families.	Layered card with soft shadow; amber bar on the pull quote.
4	Closing page: counterpoint, the call with confidence and falsifier.	Call as a full-width navy card with an amber rule; Our View box; "How we did this" and sources line.

Rules: charts placed as SVG, not recoloured. Any image needs a credit and a logged licence; use a navy duotone, not a medical stock photo of a patient. No glow or concentric circles.
